The Classic Amiga community has a lot to celebrate today. Magic User Interface (MUI) has been brought back to life. This upgrade, exclusively released for AmiKit, is a milestone for classic AmigaOS3 users!

THE DREAM HAS COME TRUE!

After more than 17 years since MUI 3.8 was released the new upgrade brings the same experience as AmigaOS4 users have been enjoying for some time. Actually, MUI 4 for AmigaOS4 and MUI 4 for AmigaOS3 are built from the same source code, so any similarities between the two builds are 100% intended! Thanks to Thore Böckelmann and Jens Maus.

Thank you to all of you wonderful people using AmiKit. You, yes you, are the key to our motivation. Your interest and feedback mean the world to us. Come participate in our [Forums](#) or get in touch via [Facebook](#) or [Twitter](#). We love hearing from you!

WHAT'S NEW in v8? *(detailed changelog below)*

The 8th major update of AmiKit exclusively integrates Magic User Interface 4 and new NetSurf web browser. AmiKit 8 delivers new software, updates, graphics, improvements & fixes. Also MorpheuZ got new powers. Now you can control even more AmiKit features with this magic daemon. Check it out for yourself! Tons of other software has been updated in this release too including system optimizations. Icons now load faster, alpha channel transparency is supported, windows performs more effectively, memory fragmentation has been decreased, etc.

BOOTABLE FLASH DISK - LIMITED COLLECTOR'S EDITION ([Buy Here](#))

New AmiKit 8 was exclusively released on a bootable solid metal design flash disk.

It contains a very smallweight "live boot" environemnt called AmiPUP, which is based on Slacko Puppy Linux distro (doesn't boot on Mac, though). It is visuall modified to look like AmiKit and contains E-UAE emulator with AmiKit files pre-installed. At boot, AmiPUP loads EVERYTHING into RAM, so all applications load blazing fast! The host system is never touched!

NEW! A BUG NOTE: If you installed this update and then you run "Install Patches" to install additional patches into your OS3.9, it might happen that PNG won't be shown correctly anymore. If this happens please add C:morelibspace command into your Startup-Sequence, just right after C:Safe. Another alternative how to avoid such a problems with PNG icons is to run "Install Patches" BEFORE you install this update.
