

AMIKIT FOR WINDOWS

Windows 7 SP1, 8.1, 10 and 11 (64-bit)

FOR SUPPORT JOIN OUR DISCORD COMMUNITY

REQUIREMENTS

- **Windows 7 SP1**, **8.1**, **10** or **11**, 64-bit (Windows 7 and 8.1 first need Microsoft **.NET Framework 4.8** and the **Visual C++ Redistributable (x64)**, Windows 7 also the Platform Update **KB2670838**; Windows 10 and 11 have all of it)
- about 2 GB free disk space (AmiKit itself takes 1.3 GB)
- internet connection during the installation (Customer ID check, graphics driver download)
- **Amiga Forever** installed on this PC, or its **ISO** file (or another supported AmigaOS ISO)

AmiKit installs into one folder, `C:\Users\<you>\AmiKit`, and changes nothing else on your system: no administrator rights, no extra packages. The only optional admin step is the Windows Firewall rule for WinUAE (one prompt, you may decline it).

INSTALLATION

STEP 1: RUN THE INSTALLER

Double-click **amikit1250-setup-2026.exe** (do not run it as administrator). Enter your **Customer ID** (at the bottom of your personal download page and in the E-Junkie e-mail), tick the license, click **Continue**, then **Install**.

Amiga Forever installed on this PC? The installer says so and AmigaOS is installed from it automatically. To use an ISO instead, tick **Do not use Amiga Forever**. Otherwise select your **Amiga Forever ISO** file when asked, or click **Install** without one and add it later (see TIPS & TRICKS). The ISO is not copied, so keep it where it is.

STEP 2: LAUNCH AMIKIT TO INSTALL AMIGAOS

Click **Launch AmiKit** in the setup window (later: the **AmiKit** icon on your desktop or in the Start menu, then **Launch**). AmiKit starts with the free, bundled AROS Kickstart, finds your Amiga Forever files or ISO and imports AmigaOS. Just follow the on-screen prompts.

NEXT: A SCREEN-MODE RESOLUTION REQUESTER

When the import finishes, start AmiKit again: it now runs your real AmigaOS and asks for a screen mode. A FullHD **1920x1080x32** resolution is recommended (if your monitor supports it). Click **Save**.

Change it later in AmiKit > Prefs > ScreenMode, or type `AmiKitReset` in a Shell and reboot.

HAVE FUN!

TIPS & TRICKS

NO ISO SELECTED DURING THE INSTALLATION?

Name it exactly **AmigaForever.iso** and copy it into this folder (the last setup screen links to it):

`C:\Users\<you>\AmiKit\RabbitHole\RequiredFiles\`

ONLY THE AMIGA FOREVER INSTALLER, NO ISO?

Install Amiga Forever first. AmiKit finds it by itself, no ISO is needed then.

THE AMIKIT LAUNCHER

Opening AmiKit shows a small window: **Launch** starts AmiKit, **Configure** opens the WinUAE settings (not needed for normal use), **Web** opens the AmiKit website and **Exit** closes the window.

DISPLAY THE WINUAE CONFIG PANEL

To show the WinUAE config panel while AmiKit is running, press **F12** (on some laptops **Fn+F12**).

A DIFFERENT AMIGAOS ISO?

With Amiga Forever the Kickstart ROMs are installed automatically. For a different AmigaOS ISO, copy your Kickstart ROM into `RabbitHole\ROMs` and name it **kick.rom** first, then click **Configure** in the AmiKit launcher and select the ISO in WinUAE under **CD & Hard drives**.

REMOVING AMIKIT

Settings > Apps > Installed apps > **AmiKit** > Uninstall, or run the setup again and click **Remove**. This deletes the AmiKit folder including RabbitHole, the shortcuts and the firewall rule. Nothing else was installed. To start over instead, run the setup again and click **Re-install**.
